To complete the deployment need to following three step:

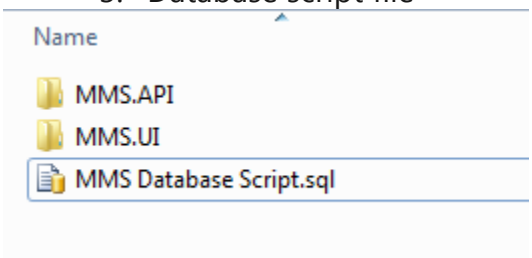
1. Database creation in MS SQL Server.
2. API (Backend) deployment in IIS.
3. UI (Frontend) deployment in IIS.

Prerequisite

4. IIS configure in windows.
5. MS SQL Server in window.
6. Hosting bundle .net core 2.1 in window.

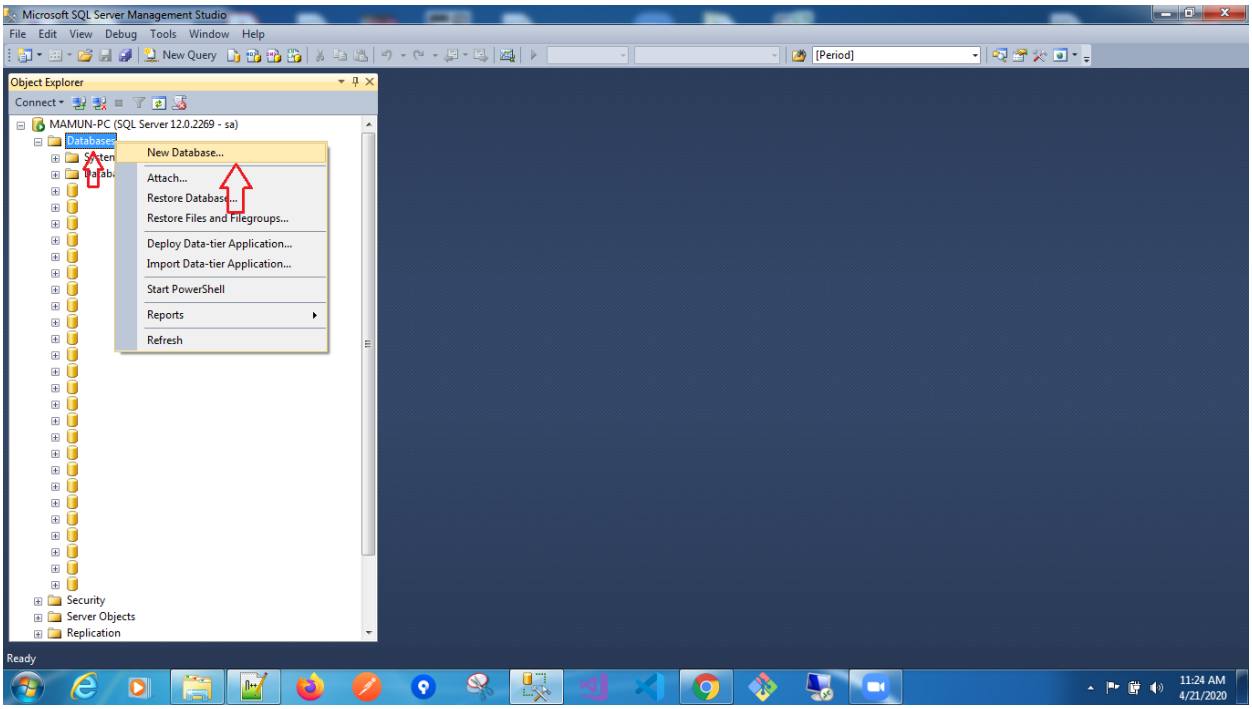
Deployment Contents

1. MMS.API
2. MMS.UI
3. Database script file

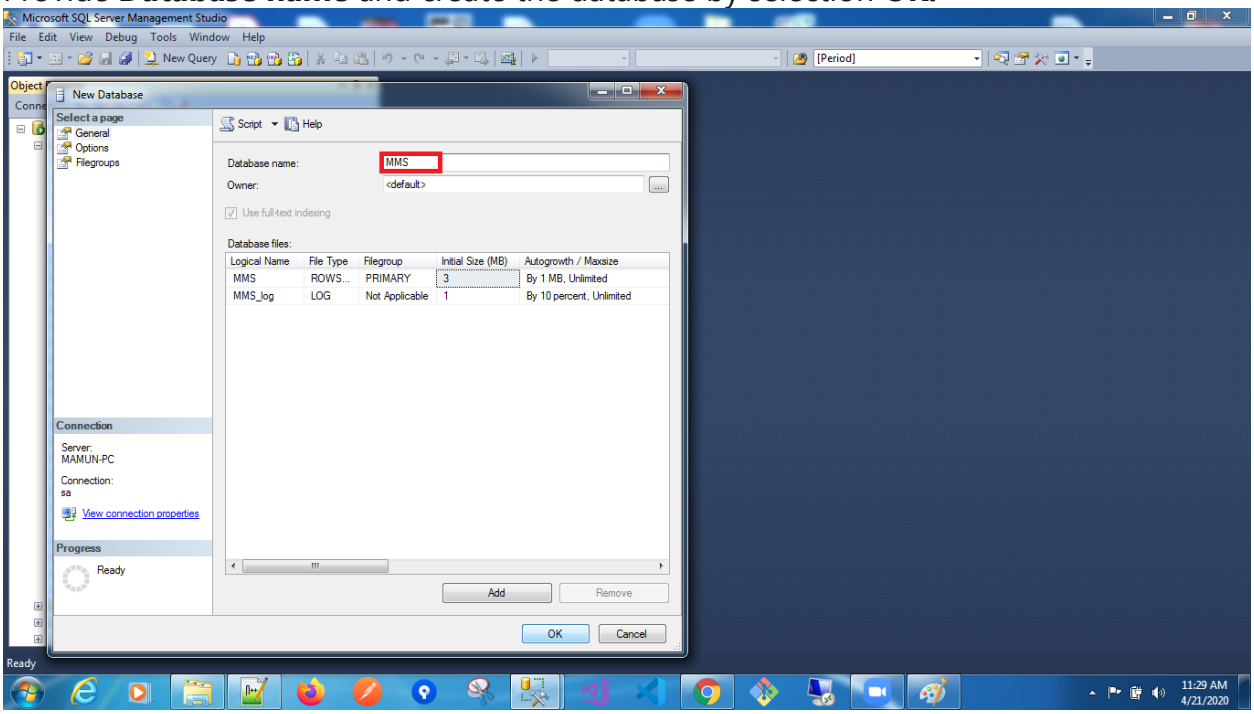


Database create in MS SQL Server

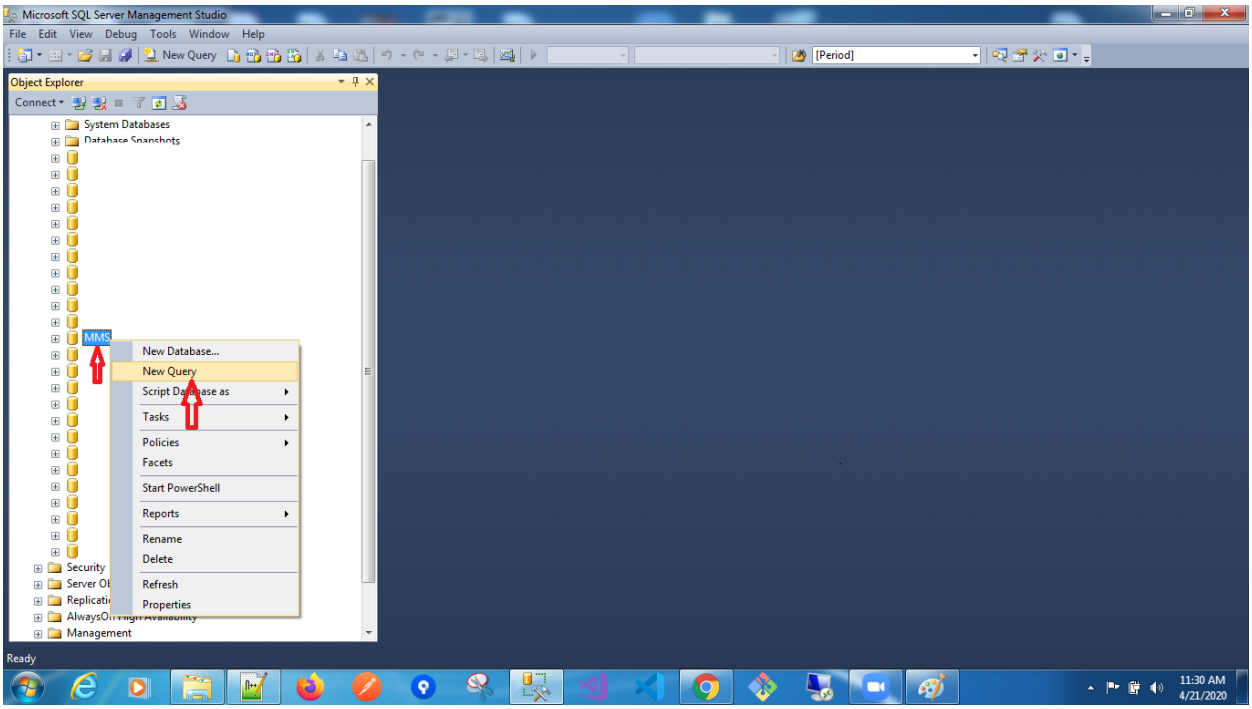
1. Open SQL Server Management Studio.
2. In Object Explore Manager right-click the **Databases** folder. Click **New Database** from the contextual menu.



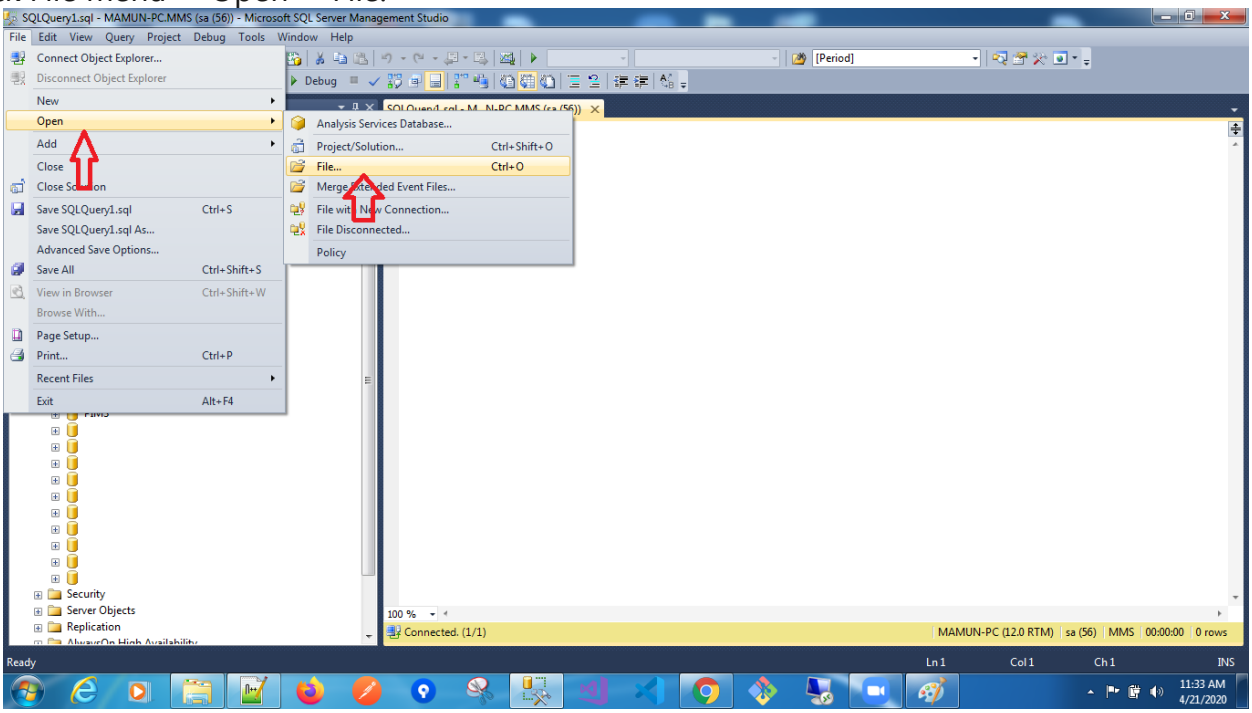
3. Provide **Database name** and create the database by selection **OK.**



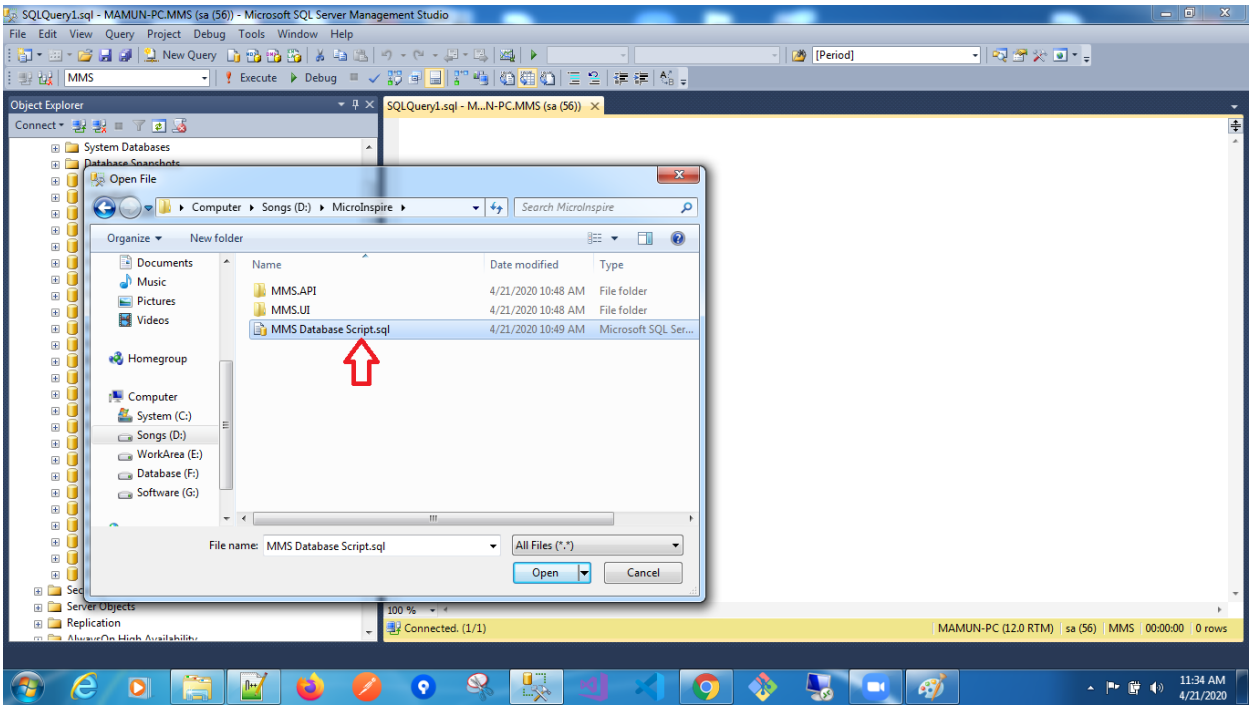
4. In Manager, open **Databases** node in the **Object Explore Manager** panel. Right-click the **Created Database**. Click **New Query** from the contextual menu.



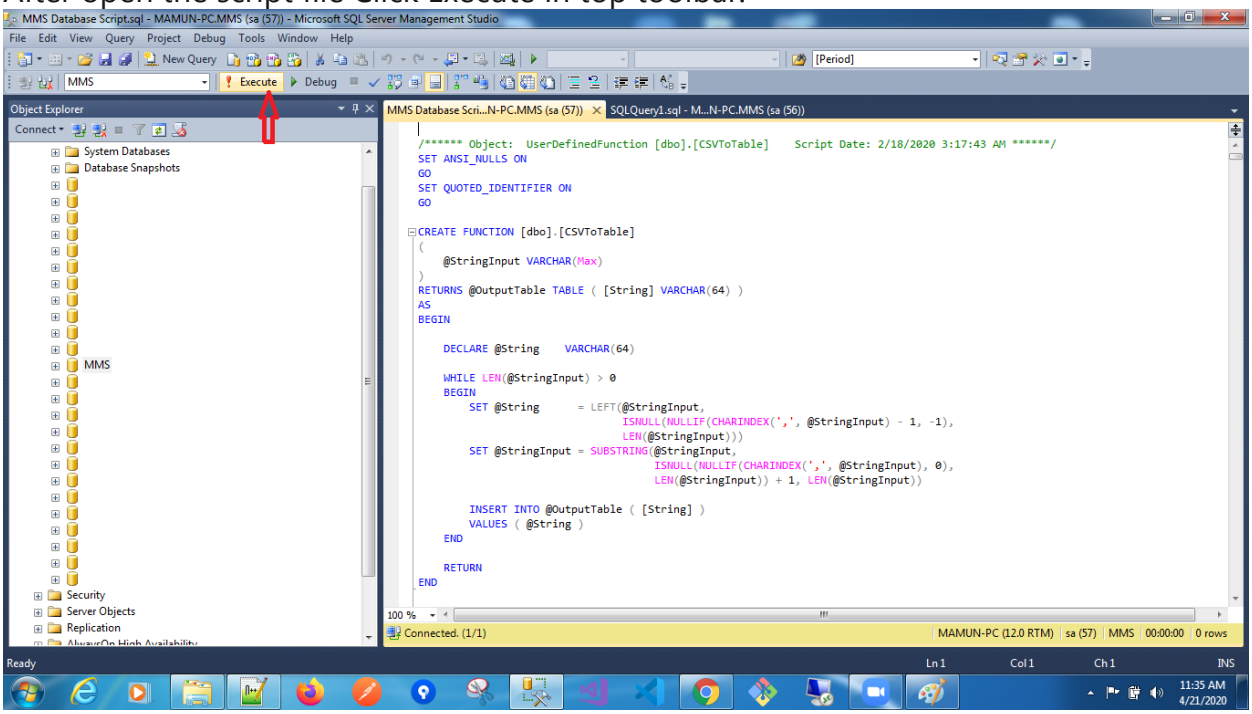
5. Click File menu=>Open=>File.



6. Select the provided database script file. Then click Open.

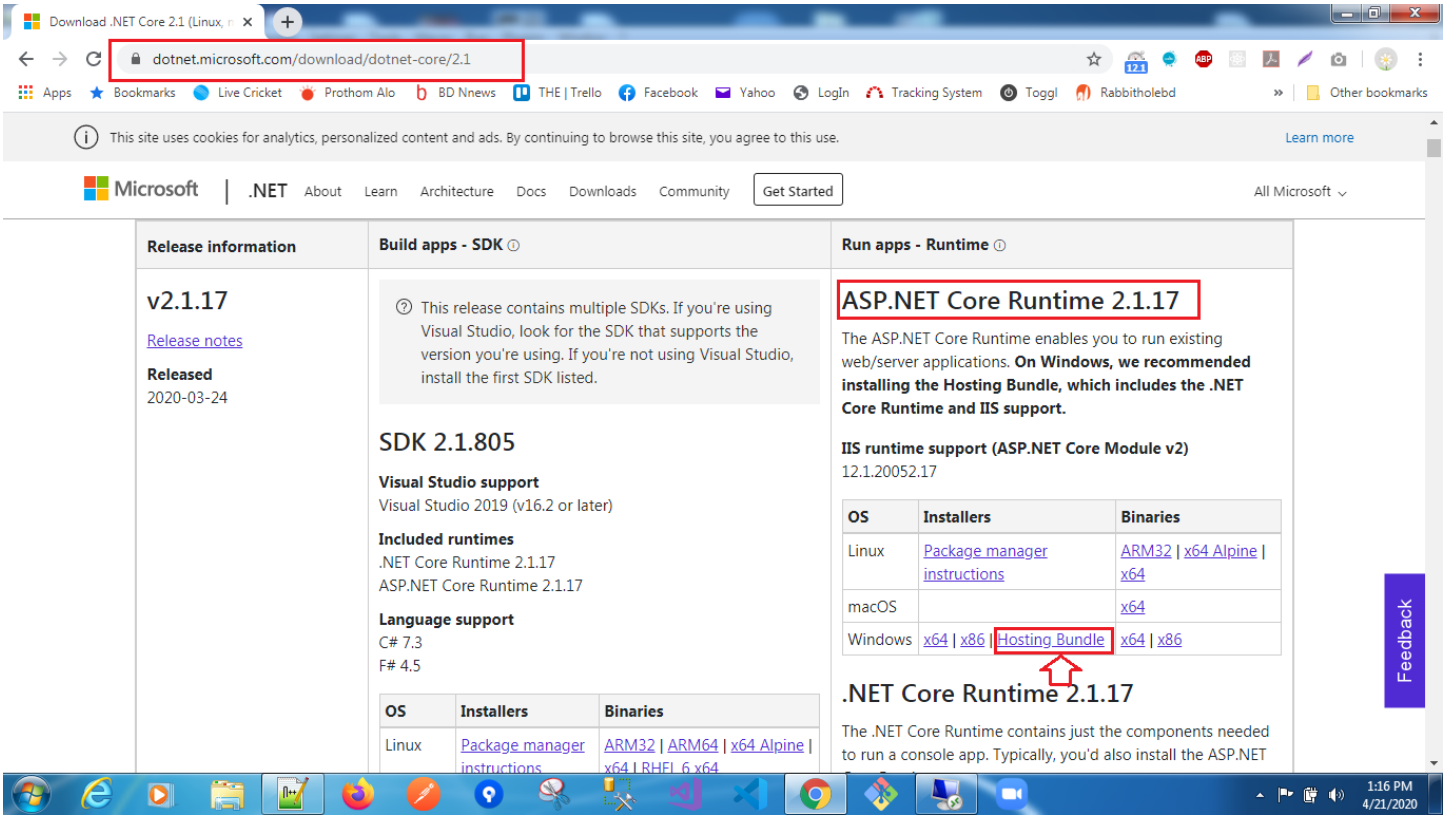


7. After open the script file Click Execute in top toolbar.



Deploy API (Backend) in IIS

If not install hosting bundle .net core 2.1 in window.
Please download & install from bellow link:
https://dotnet.microsoft.com/download/dotnet-core/2.1



1. On the hosting system, create a folder to contain the app's published folders and files. In a following step, the folder's path is provided to IIS as the physical path to the app.
2. In IIS Manager, open the server's node in the **Connections** panel. Right-click the **Sites** folder. Select **Add Website** from the contextual menu.
3. Provide a **Site name** and set the **Physical path** to the app's deployment folder. Provide the **Binding** configuration and create the website by selecting **OK**:

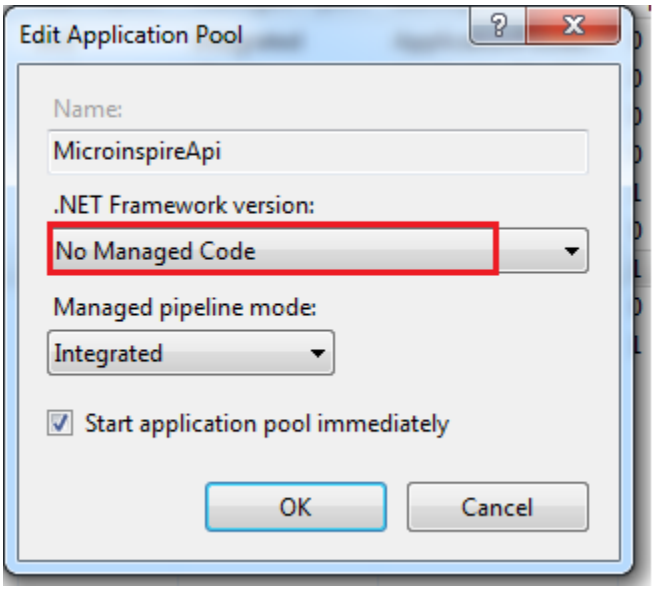
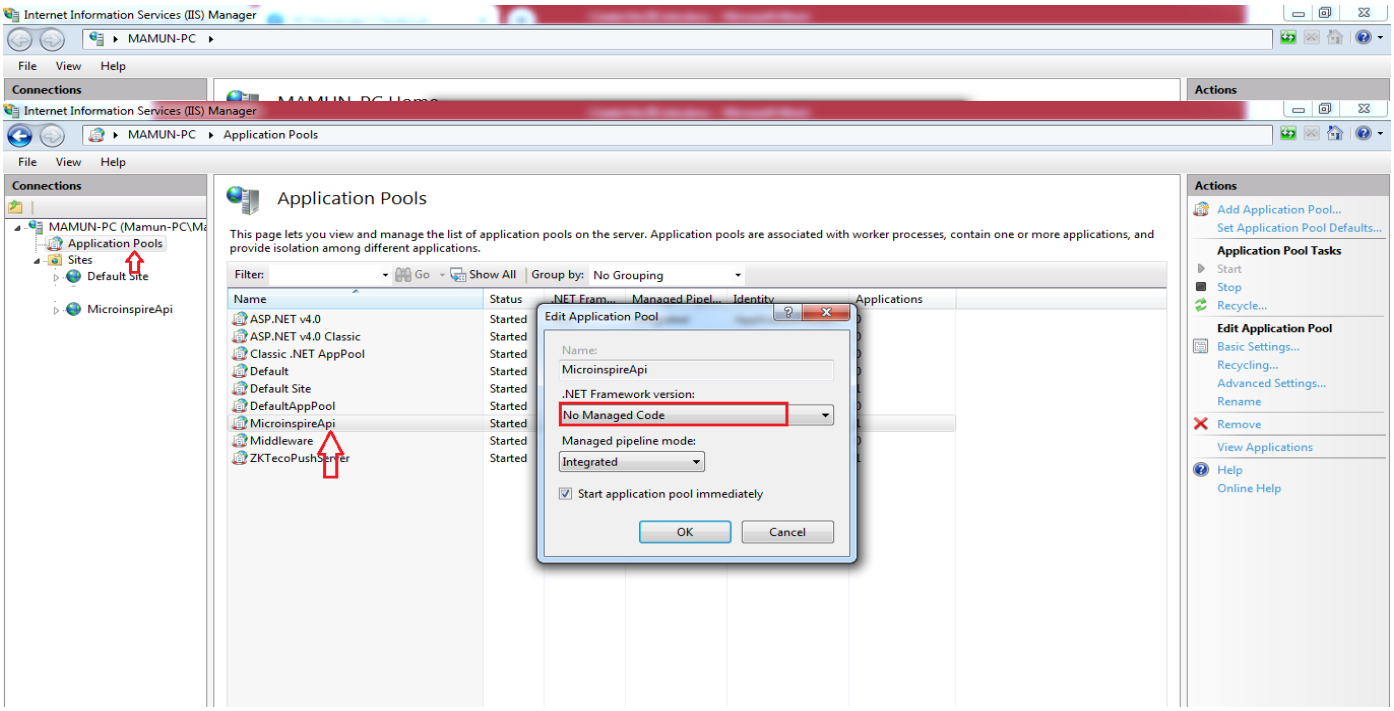
4. Under the server's node, select **Application Pools**.
5. Right-click the site's app pool and select **Basic Settings** from the contextual menu.
6. In the **Edit Application Pool** window, set the **.NET CLR version** to **No Managed Code**:





Deploy UI (Frontend) in IIS

1. On the hosting system, create a folder to contain the app's published folders and files. In a following step, the folder's path is provided to IIS as the physical path to the app.
2. In IIS Manager, open the server's node in the **Connections** panel. Right-click the **Sites** folder. Select **Add Website** from the contextual menu.
3. Provide a **Site name** and set the **Physical path** to the app's deployment folder. Provide the **Binding** configuration and create the website by selecting **OK**:
4. Select DefaultAppPool

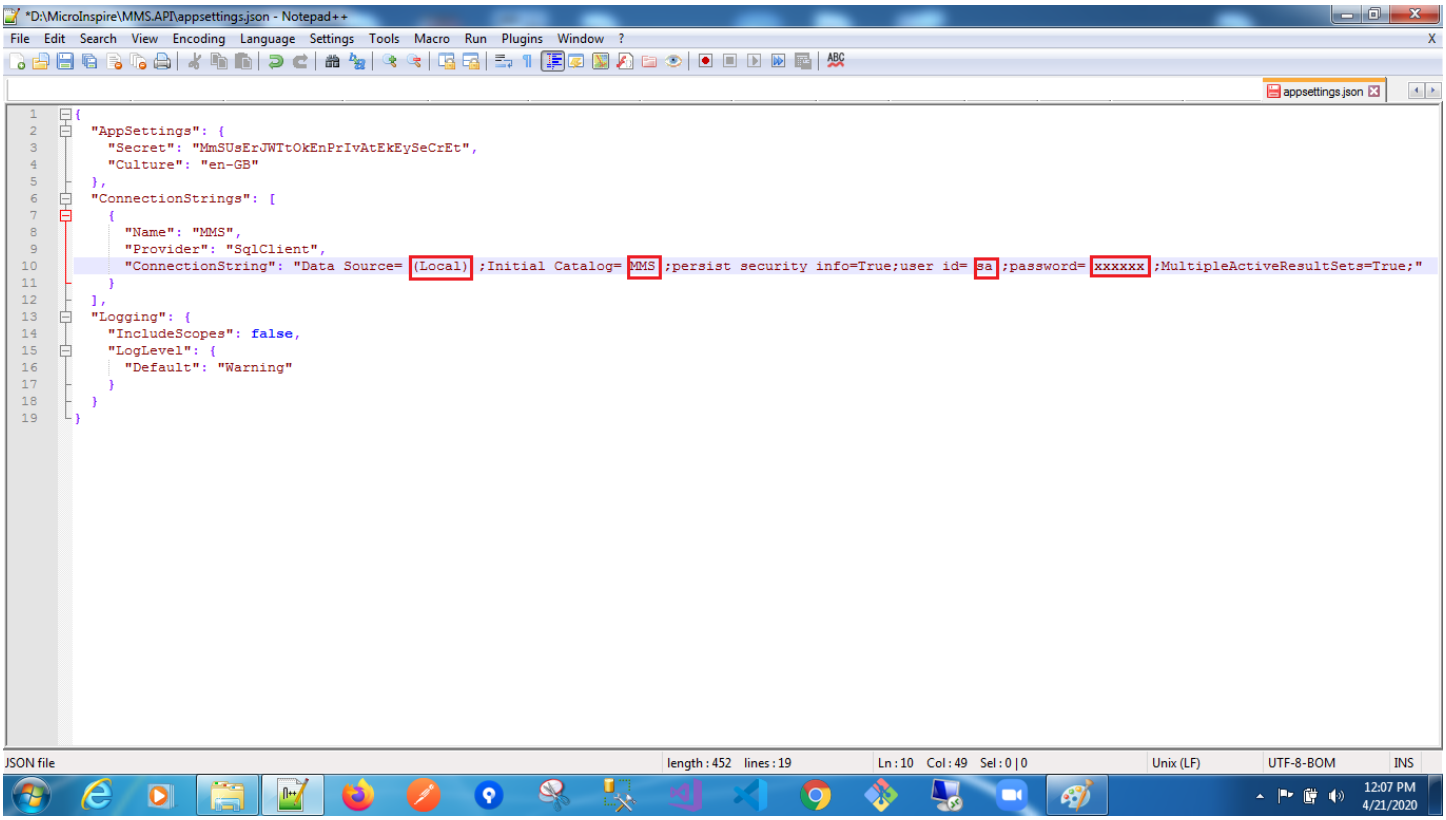
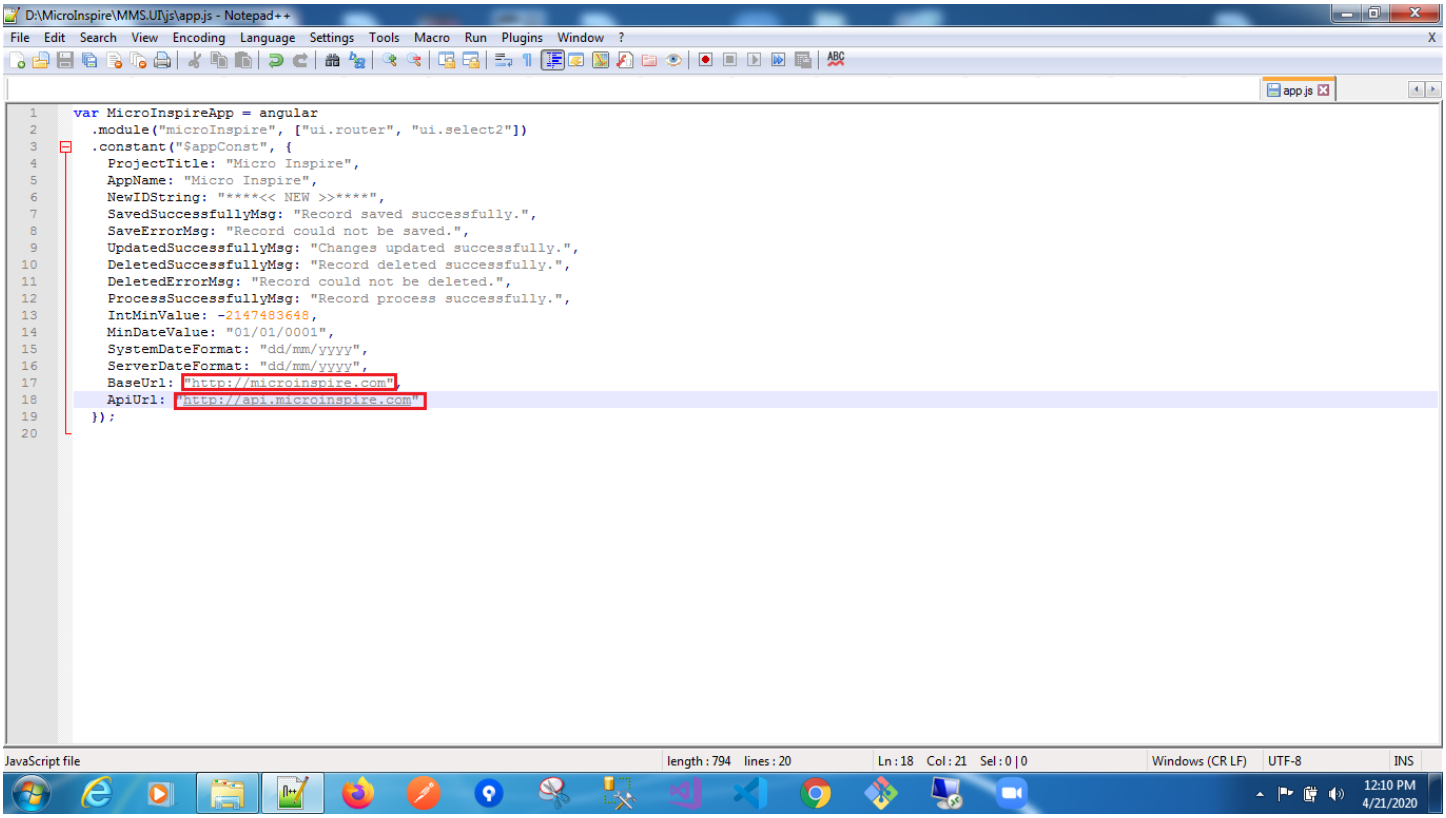
To change SQL Server database connection string open Deploymentfolder\MMS.API\appsettings.json.

Set “Data Source”,” Initial Catalog”,”user id”,”password”.



To change BaseUrl & ApiUrl open DeploymentFolder\ MMS.UI\js\app.js.

1. BaseUrl = UI (Frontend) Url
2. ApiUrl = API (Backend) Url



Finally restart two site from IIS.
